

Instructions for Eligibility Based on Census Data: 2012 Data Release

Step 1: Become familiar with the census data format

About the 2010 Census Block Group

This file contains the 2010 Census Block Groups (CBG). Every 10 years the Census updates the area-based measures such as census tracts, blocks and block groups. This means that the income *and* CBG data released in 2003 should no longer be used.

The ideal size of a CBG is around 400 houses but vary by region and area characteristics. Contrary to the name, CBGs are not usually shaped like rectangles; rather they can take any shape. The graphic on the left shows the relationship of CBGs to other geographical areas as well as the components of the GEOID.

Every CBG in the country is numerated, meaning it has a unique number assigned to it. This number is called the GEOID.

What information is in the GEOID?

The GEOID contains 12 digits. Each position in the GEOID signifies a different level of geographical area. Every digit is important, even the first zero. This is important to remember when importing these data, because some programs drop the first zero. There is more information below about how to import the data correctly.

Here is an example of a GEOID from Autauga County, Alabama:

010010201001

- **STATE:** The first 2 characters are the State code
- **COUNTY:** The next 3 characters are the county code
- **TRACT:** The next 6 characters are the census tract code
- **BLOCK GROUP:** The last character is the census block group code

Step 2: How to determine eligibility

Each State file contains the GEOID, the County Name, State Name, if the CBG is Eligible for SFSP and CACFP, and percentages of CACFP and SFSP children eligible for free and reduced priced school meals in that CBG. Finally, we have separated each GEOID into its geographical components in the last four columns: State, County, Tract, and Block Group.

GEOID	County Name	State Name	Eligible? (Yes or No)	SFSP: Percent 0-18 year olds eligible for free and reduced price meals (%)	CACFP: Percent 0-12 year olds eligible for free and reduced price meals (%)	State Code	County Code	Tract Code	Block Group Code
010010201001	Autauga County	Alabama	No	14.3	17.6	01	001	020100	1
010010201002	Autauga County	Alabama	No	22.1	26.2	01	001	020100	2
010010202001	Autauga County	Alabama	No	31.1	23.3	01	001	020200	1
010010202002	Autauga County	Alabama	No	42.4	48	01	001	020200	2

Things to be aware of when opening the State file(s):

If you open the file in Excel Import Wizard, you should use the ‘Tab Delimited’ option, and make sure when importing that all fields are formatted as ‘Text’ at the import step. If the fields are formatted as ‘numeric’ or ‘general,’ then Excel automatically deletes the first zero(s). In the last data release, it was reported that some non-Excel programs truncated zeros at the end of the number. Please ensure you have the expected number of digits in each column.

Also, if you have Excel 2003 or earlier versions, most files will open without incident, but large files may be truncated. If you think this may have occurred, please verify the file with a text editor. If you open the file in a word processing software but are having trouble aligning the columns, change the font to ‘Courier New’ or similar fixed width font.

Look up a GEOID using a map

1. Go to <http://tigerweb.geo.census.gov/tigerweb/default.htm> *this website requires [Microsoft Silverlight \(5.0\)](#)
2. When the window opens, a 'Map Content' box will be showing. Check the 'Transportation' box and then close the window by clicking on the 'X' in the upper right corner.
3. Next, using the Zoom Tool, zoom in to approximately where you'd like to look up, as near as possible to the address. If you do not know where the address is, you can use an online mapping website, like Google Maps. You can zoom by using the Zoom tool on the left side of the map or by using your mouse's scroll wheel.
4. Once you have zoomed in, select the Query button.
5. In the top of the Query window, click on the blue/yellow box with binoculars, this is a 'Spatial Query.'
6. Next, in the 'Select Map' pull down menu, chose 'Census Tracts and Blocks.'
7. In the field called 'Select Layer' highlight 'Census Block Groups.'
8. Click on the gray box with the blue circle, and click the map, as close as possible to the address.
9. A GEOID will appear in the second query box and you should search for this number in the FNS file when determining eligibility. If the address seems near to the highlighted CBG boundary, you can check for accuracy in the next step.

The screenshot shows the TIGERweb (beta) interface with the following elements and callouts:

- Map Content:** A panel on the left with a 'Transportation (Roads and Railroads)' checkbox checked. Callout: **Step 2**.
- Map:** A map of Alexandria, Virginia, with a blue-shaded Census Block Group highlighted. Callout: **Zoom (Step 3)** points to the zoom tool on the left. Callout: **Query (Step 4)** points to the Query button in the top right.
- Query Window (Top Right):** A window titled 'Query' with a 'Spatial Query' button (binoculars) selected. Callout: **Step 5**.
 - 'Select Map:' dropdown menu set to 'Census Tracts and Blocks'. Callout: **Step 6**.
 - 'Select Layer:' dropdown menu with 'Census Block Groups' selected. Callout: **Step 7**.
 - A button with a blue circle selected. Callout: **Step 8**.
- Query Window (Bottom Right):** A window titled 'Query' showing the results for 'Census Block Groups'. Callout: **Step 9**.

NAME:	1
1	GEOID: 515102001071

Look up a GEOID using American Fact Finder 2

Step A: Find the **State** and **County** codes for the GEOID.

Virginia (51) ← Step 3 State

County ANSI	County Name	Class
001	Accomack County	H1
003	Albemarle County	H1
199	York County	H1
510	Alexandria city	C7
515	Bedford city	C7
520	Bristol city	C7

← Step 4 County

1. Go to <http://www.census.gov/geo/www/ansi/countylookup.html>.
2. Pick the State of interest and choose 'Go.'
3. Above the right column, you'll see the State name and two numbers in parentheses, this is the **State Code**, the first two numbers of the GEOID. Include the first zero, if applicable.
4. Next, find the County of interest and find the three digit number to the right, this is the **County Code**, digits 3-5 of the GEOID. If you don't know the county, open a second browser window and go to Step B. The name of the county will appear in the 'Geography Name' Column, under Geography Type 'County' (not shown).

Step B: Find the **Census Tract** and Block Group codes for the GEOID.

1. Go to <http://factfinder2.census.gov/main.html>. It is important to use the American Fact Finder 2 because it uses the appropriate 2010 geographical data.
2. Click on 'Geographies' from the left menu.
3. Click on 'Address' from the menu bar and enter the address and click 'Go.'
4. Under the Geography results look for the **Census Tract** and Block Group information. The Census Tract may or may not have a decimal, but do not use the decimal when constructing the GEOID. The Block Group number is the last number of the GEOID. The **Census Tract** will be digits 6-11 of the GEOID. In this example, that would look like **SSCTY2001071**
5. If you did not know the county for Step A, that is also listed in the Geography Results box.

Step C: Putting it all together.

6. Combine the State Code, County Code, Census Tract, and Block Group into one 12-digit GEOID and search for this in the State eligibility files.

Search - Use the options on the left (search, topics, geographies, ...) to find the data you're looking for

Your Selections: 'Your Selections' is empty

Search within Results for... GO

Topics ?

Geographies (states, counties, ...) ← Step 2

Geography Results: 1-16 of 16

Geography Name	Geography Type
ZCTAS 22302	5-Digit ZIP Code Tabulation Area
Block 1007, Block Group 1, Census Tract 2001.07, Alexandria city, Virginia	Block
Block Group 1, Census Tract 2001.07, Alexandria city, Virginia	Block Group
Census Tract 2001.07, Alexandria city, Virginia	Census Tract

How to map a Census Block Group using GEOID

1. Go to <http://tigerweb.geo.census.gov/tigerweb/default.htm> *this website requires [Microsoft Silverlight \(5.0\)](#)
2. When the window opens a 'Map Content' box will be showing, check the 'Transportation' box and then close the window by clicking on the 'X' in the upper right corner.
3. Select the Query button which looks like a globe with binoculars.
4. Next, in the 'Select Map' pull down menu, chose 'Census Tracts and Blocks.'
5. In the field called 'Select Layer,' highlight 'Census Block Groups.'
6. Copy and paste the GEOID from the State eligibility file column labeled 'GEOID' into the field labeled 'GEOID.'
7. Click 'Submit Query.'
